

Serum, Foetal bovine (FBS), Characterised, New Zealand origin

Thermo
SCIENTIFIC

NEW

85

Characterised FBS is comparable to the highest quality FBS from other suppliers, but is lower priced than defined FBS. It is filtered through 3 sequential 0.1µm pore size filters.

Serum, foetal bovine (FBS), characterised, US origin, Thermo Scientific HyClone®

Thermo
SCIENTIFIC

dry ice

85

Characterised FBS is filtered through three sequential 100nm (0.1µm) pore sized rated filters.

Characterised FBS is comparable to the highest quality FBS from other suppliers. It is lower in price than Defined FBS, but meets the requirements of most discriminating FBS users.

Serum, foetal bovine (FBS), research grade EU approved

Thermo
SCIENTIFIC

dry ice

85

Thermo Scientific HyClone® research grade foetal bovine serum is collected and imported from South American countries in compliance with EU regulations (Directive 92/118/EEC). Strict manufacturing and quality control procedures are followed to ensure its quality and suitability for research applications. EU approved FBS is filtered using sequential 100nm (0.1µm) pore sized rated filters. Not available for sale in North America.
