Microscope slides, Thermo Scientific Shandon Cytoslides®

Thermo
SCIENTIFIC

- All slides are 75mm x 25mm, made from high quality optical glass
- Specimen area (12mm diameter) is outlined for rapid location during screening
- Available as coated and un-coated slides
- Coated slides eliminate the need for albumin coating procedures and the background staining necessary on albuminised, IHC or ISH processed slides
- Uncoated slides are available with the circle on the front or back

For use with the Thermo Scientific Shandon Cytospin® cyto centrifuge.

Single Cytoslides®

Specially made for use with EZ Cytofunnels®. A white, 12mm diameter circle on the slide defines the area where cells will be displayed to allow for efficient and rapid location. Uncoated slides available with circle on front or back.

Double Cytoslides®

Specially designed for use with EZ Double Cytofunnel® chambers. Each specimen is displayed onto the slide within a circle marked '1' or '2' which corresponds with the EZ Double Cytofunnel® chamber.

Mask Cytoslides®

Specially produced for immunofluorescence. Black coating masks out UV light so that only the specimen within the circle can be viewed through a microscope.

Catalogue No	Alt. No	Description	Treated, [Y/ N]	Pack qty
SD5991056	5991056	Cytoslides®, single circle, circle on back	Y	100

SD9990323	9990323	Cup, filled to 60mL	120mL	125

Red collection fluid, CytoRich® Red, Thermo Scientific Shandon

Thermo
SCIENTIFIC

50

Lyses RBCs and solubilises proteins.

- For a higher cell yield and a cleaner background
- Ready to use alcohol based fluid
- Compatible with immunohistochemistry
- Pre-filled containers available
